Veridict

Technology focus: The Swedish AI company Veridict provides state-of-the-art automated real-time tracking, visualization, advanced Predictive Analytics and instant individual interaction with hundreds of thousands of transport units, by connecting with thousands of transport operators and other traffic data sources worldwide.

Next R&D project idea: Within connected Public Transport or MaaS (Mobility-as-a-Service) with focus on simplifying and unifying transportation from an international perspective.

Ideal R&D project partner? Innovative PTOs/PTAs as well as global logistics and transportation actors, which all could benefit from teaming up with Veridict.

References so far: Scania and Ericsson are two MNEs within connected and automated transportation currently collaborating with Veridict.
